In my piece about the raise of Polymarket*, I feature Kalshi, PredictIt and Augur, but in the weeks after the publication, I learned that I'm completely unaware of abundance of prediction market project launched recently.

I collected all of them in a list organized by the size of the X profile.

Did I miss something?

Real Money (Can Cash Out)

1. @Polymarket (632.7k) - **Polymarket.** The world largest prediction market that runs on the Polygon blockchain.
2. @olab_xyz (177.9k) - **O.LAB** is the world's first decentralized epistemic truth machine, operating as a prediction market built on the Monad blockchain with features like tradable intelligence products and an AI oracle for transparent decision-making.
3. @Kalshi (150k) - **Kalshi** is a CFTC-regulated exchange operating in all 50 U.S. states, allowing users to buy and sell event contracts on politics, sports, entertainment, crypto prices, weather, economics, and more.
4. @AugurProject (146.8k) - **Augur** is a decentralized project built on the Ethereum blockchain. Its status is a bit unclear, but it seems resurrecting.
5. @MyriadMarkets (64.4k) - **Myriad** embeds prediction markets directly into news articles and social media content, so you can bet while you read without ever leaving the page.
6. @PredictIt (34.1k) - **PredictIt** is a political futures market where users buy

and sell shares on election results, policy outcomes, and other political events, functioning as a real-money platform with per-market trading caps.

@chompdotgames (31.1k) - **Chomp** gamifies prediction markets into a 60-second quiz format where you burn $BONK tokens to reveal answers and earn rewards based on social consensus.

@BuzzingApp (8.3k) - **Buzzing** turns any trending news story into a prediction market, targeting social media users who want to monetize their opinions on current events.

@Truemarketsorg (6.7k) - **Truemarkets** positions itself as an AI-enhanced prediction oracle that caught Vitalik Buterin's attention (he bought 32 ETH worth of their NFTs), focusing on real-time news data.

7. @narrativexyz (6.2k) - **Narrative** appears to be building "perpetual information markets" but is still in early testnet stage with limited public information available.

8. @9livesso (6.0k) - **9Lives** built a technically sophisticated prediction market using Rust smart contracts that combines parimutuel and auction mechanics for infinite liquidity without market makers.

9. @kairosdotwin (4.3k) - **Kairos** makes prediction markets feel like viral social posts that you share with friends, turning beliefs into Bitcoin-based wagers that spread through your network.

10. @meleemarkets (3.9k) - **Melee** combines the viral meme energy of Pump.fun with prediction markets on Solana, creating what they call "chaos betting" on influencers and cultural moments.

11. @polldotfun (2.1k) - **Poll** focuses on casual friend-to-friend betting with Apple Pay integration, letting you create custom bets on anything and settle through iMessage.

12. @predictandpump (1.6k) - **Predict and Pump** appears to be a Solana DEX for prediction markets with limited public information available.

13. @foresightnow (935) - **Foresight** operates on the Katana blockchain's mainnet. Users stake and trade with cryptocurrency (such as stablecoins or other tokens with real value) on outcomes of real-world events like elections, sports, and market trends.

14. @vpop_wtf (523) - **vPOP** lets you bet on subjective cultural topics by predicting what the consensus opinion will be rather than betting on actual factual outcomes.

15. @kash_bot (289) - **Kash** turns your X feed into tradeable markets, letting you bet directly on headlines and viral moments as they happen in real-time.

16.

Play Money (No Cash Out)

17. @kizzymobile (131.8k) - **Kizzy** is basically DraftKings for the influencer

economy, letting you bet on TikTok views, YouTube subscriber counts, and other social media metrics from your phone. Real money version planned in the future.

2. @ManifoldMarkets (10.6k) - **Manifold is probably my favourite so far** because of how accessible it is—it feels like the X of prediction markets where anyone can create play-money bets on literally anything, from "will my date go well?" to global events.

Defunct

- @veil (3.3k) - **Veil** was an early attempt at making decentralized prediction markets user-friendly but shut down in 2019 after realizing they were trying to do too much for too small an audience.

Protocol

- @azuroprotocol (90.1k) - **Azuro** doesn't run betting apps but powers 30+ of them with shared liquidity pools, letting developers launch prediction platforms in minutes while liquidity providers earn yield from all the betting action. They started focused on sport betting but now goes beyond.

* The Polymarket article:

Deltabadger @deltabadgerapp · Jul 15

Polymarket is the most important development in crypto since NFTs.

✦ What are prediction markets?
✦ How does Polymarket work?
✦ Will $POL holders benefit?
✦ What does partnership with 𝕏 mean?
✦ Do you qualify for a Polymarket airdrop?

Polymarket: Truth Machine
